INDEX.

Agassiz, Professor, on the analogy between the fossal flora of the European Miocene, and the living flora of America, 180—His glacial theory not abandoned, 396.

Agate, artificial colours of, described, 183.

Anderson, Thomas, M.D., on the constitution of the phosphates of the organic alkalies, 169.

Anthracite coal, observations on, 181.

Asteriadæ, fossil, of Britain, considered by Professor Edward Forbes, 379.

Atmosphere, researches on its constitution, 392.

Australia, its geology, 187.

Balfour, Professor, his notes of a botanical excursion to Braemar, 122.

Barry, Dr Martin, his physiological discoveries, 194.

Bawtree, W. E., M.D., his description of some Sepulchral pits of Indian origin in North America, 86.

Beche, Sir H. de la, his account of the Proceedings of the Geological Society of France, 155—Of Ireland, 312.

Beke, Dr, on the sources of the Nile in the Mountains of the Moon, 221.

Birds, ancient, of New Zealand, noticed, 196.

Boracite, amorphous, observations on, by Dr Karsten, 181.

Boucheporn, M., his biography of D'Aubuisson, 1, 205.

Brown, Dr R. E., on the source of motions upon the earth, and of the means by which they are sustained, 148, 302.

Burat, Amédée, on the continuity of metalliferous repositories in depth, 346.

Carboniferous period, its vegetation considered by Dr Hooker, 362.

Climate of Iceland, account of, 281.

Coal-formation of the Maremma of Tuscany, 369—Of Labuan, 331.

Coal of the Kangra Valley noticed, 183.

Coal-formation containing reptilian remains, 185.

XUM

Cofferdam, portable, for the use of harbours and other marine works, described, 140.

Connell, Professor, on carbonate of copper and zinc from Matlock, 36.

Copper mines of Burra-Burra, in Australia, noticed, 180.

Cotton, cultivation of, in India, 193.

Crystallised bodies, their structure considered by M. Baudrimont, 186.

Currents, on their transporting power, 189.

D'Aubuisson, Engineer-in-Chief, &c., his biography, by M. Boucheporn, 1, 205.

Davy, Dr John. Observations on the urinary excrement of insects, 17—On carbonic acid as a solvent in the process of vegetation, 61—On Centipede and Helix oblonga, 383.

Diamond, on its oxydation in the liquid way, 388.

Diluvial or quaternary formation, observations on, by M. D'Archiac, 176.

Earth, source of motions upon the, by Dr R. E. Brown, 148, 302.

Ebelmen, M., on artificial hyalite and hydrophane, 187.

Ebony, remarks on, 190.

Equus Hemionus, notice of, 194.

Ethnological Society of London, anniversary address to, for year 1848, delivered by Dr Prichard, 336.

Fauna of Sweden, changes in, 400.

Favre, A., Professor of Geology in the Academy of Geneva, his geological researches in the neighbourhood of Chamounix, 69.

Fleming, Dr J., geological notices by, 171.

Forbes, Professor Edward, on the distribution of the genera of plants and animals, 175—On fossil British Asteriadæ, 379.

Forbes, Professor J. D., on the volcanoes of the Vivarais, 170.

Forests, preservation of, in the north-west provinces of India, 190.

Fyfe, Dr A., on the comparative value of different kinds of coal for the purpose of illumination, 37, 267.

Glacial Theory not abandoned by Professor Agassiz, 396.

Glaciers of Iceland described by Sartorius von Waltershausen, 136 —Glacier striæ, account of, 130.

Geographical distribution of Animals, by Professor Adams, 197.

Geology of the late Voyages of Discovery and Survey, 317.

Guyot, M. A., on the erratic blocks of the basin of the Rhine, 20.

Hall, Marshall, M.D., on the effects of certain physical and chemical agents on the nervous system, 252.

Heligoland, its present and former extent, 188.

Hooker, Dr, on the vegetation of the carboniferous period, as compared with that of the present day, 362.

Hopkins, W., M.A., F.R.S., on the internal pressure to which rock masses may be subjected, and its possible influence in the production of the laminated structure, 115.

Iceland, general view of its mode of formation, 102—its climate and glaciers, 129, 281.

Indus, great inundation of, 393.

Karsten, Dr, his account of massive boracite, 181.

Kreatine, on its preparation, and quantity of, in the flesh of different animals, by Dr Gregory, 172.

Lake Ontario, notice of the oscillation of its waters, 107.

Level of the Caspian and Dead Seas, 398.

Lochaber, its parallel roads or shelves described, 49.

Macquarie river, flood of, 395.

Malay Peninsula, its metalliferous deposits, 332.

Maremma in Tuscany, its coal-formation described, 369.

Marine shells in hills of drift and boulders, 398.

Medicines, remarks on their adulteration, 198.

Mercury, ores of, in the coal-formation of Saarbrück, 189.

Metalliferous repositories, their continuity in depth considered, 346.

Miller, J. F., Esq., on the meteorology of Whitehaven, 376.

Molluscs, sounds emitted by, 401—their boring in rocks, 401.

Nile, river, on its sources in the Mountains of the Moon, by Dr Charles T. Beke, Ph. D., &c., 221.

Number of vertebrate, molluscous, articulated, and radiated animals, 399.

Ocean, its depth and saltness, 27.

Oxydation of diamond in the liquid way, 338.

Patents granted for Scotland from 3d April 1848 to 21st June 1848, 202—from 22d June to 22d September, 405.

Prichard, James Cowles, M.D., F.R.S., Corresponding Member of the Institute of France, his anniversary address for 1848, read to the Ethnological Society of London, on the recent progress of Ethnology, 336.

Prizes, list of, offered by the Royal Scottish Society of Arts, 389.

Proceedings of Societies, viz., Royal Society of Edinburgh from December 1847 to March 1848, 169—Of Wernerian Natural History Society, 174—Of the Geological Society of France, 155, 311—Of the Geological Society of Ireland, 312.

Publications, new, noticed, 199, 408.

Rain, its depth in some localities at different altitudes in Lancashire, Cheshire, and Derbyshire, 392.

Reptilian remains in the coal-formations, 185.

Rogers, Professors W. B. and R. E., on the decomposition and partial solution of minerals, rocks, &c., by pure water, and water charged with carbonic acid, 163—On the oxydation of the Diamond in the liquid way, 388.

Salt, common, its amount in all the oceans, 398.

Sand-banks of Mount's Bay, on their rapid diminution, 113.

Sea, its temperature at Spitzbergen, 178.

Silicification of plants and animals, observations on, 185.

Stevenson, Thomas, Esq., F.R.S.E., C. E., his account of a portable cofferdam for the use of harbour and other marine works, 140.

Talus slopes, 398.

Tea, plantation of, in India, by William Jameson, Esq., 191.

Thomson, James, jun., M.A., Glasgow College, on the parallel roads of Lochaber, 49—his Letter in regard to the parallel roads of Lochaber, 404.

Volcanoes of Central France not in a state of activity in the time of Julius Cæsar, 119.

Waltershausen W. S., his general view of the formation of Iceland, 102—And observations on the glaciers and climate of Iceland, 129, 281.

Whitehaven, its meteorology considered, 374.

Whirlwinds at St Just, in Cornwall, 111.

Zodaical Light, observations on, by Professor C. P. Smyth, 173.

END OF VOLUME FORTY-FIVE.

PRINTED BY NEILL AND COMPANY, EDINBURGH.
